SUMMARY

- I'm a CSE undergraduate at CUET who builds full-stack web applications with React, Node.js, and PostgreSQL. I previously worked as a Generalist (contractor) at Fleet AI, Inc., authoring and QA-reviewing long-horizon agentic AI evaluation tasks. Along the way, I've published two Chrome extensions on the Web Store, co-authored an IEEE paper on explainable AI, and placed 7th internationally in a shared task at ACL 2026. My interests span Web Development, Deep Learning, and Computer Vision.

EDUCATION

- **B.Sc. in Computer Science and Engineering** (2023 – Present)
Chittagong University of Engineering and Technology (CUET) — **CGPA: 3.51/4.00, rising: latest term 3.85**
- **Higher Secondary Certificate (HSC)** (2021)
Viqarunnisa Noon College — **GPA: 5.00/5.00**

EXPERIENCE

- **Generalist (Independent Contractor)** (May 2026 – Aug 2026)
Fleet AI, Inc. (Remote)
Authored long-horizon, multi-step agentic AI evaluation tasks across multiple simulated enterprise application environments, grounding realistic workflows in verified environment data. Conducted QA review on other contributors' tasks, assessing must-have/should-have coverage, action counts, ambiguity, codename compliance, and project-specific rules to ensure correctness, novelty, and robust edge-case coverage.

SKILLS

- **Languages:** C++, JavaScript (ES6+), Python, Java, C, SQL.
- **Web Development:** React.js, Node.js, Next.js, Express.js, Firebase, Tailwind CSS, shadcn/ui.
- **AI & Machine Learning:** LLM Prompt Recovery, Multimodal Deep Learning, NLP, Gemini API.
- **Systems & Architecture:** MVC Architecture, Data Structures, Algorithms, Object-Oriented Programming (OOP), DBMS, OS Scheduling.
- **Tools:** Docker, Git/GitHub, TanStack Router, LaTeX, Linux.

PROJECTS

- **RIPHours: Productivity Chrome Extension** [\[Chrome Web Store\]](#) — [\[GitHub\]](#)
Solo Developer. Built and published a privacy-first Chrome Extension using **JavaScript, Chrome APIs, and Chrome Storage Sync**. Engineered accurate time-tracking via the Page Visibility API with auto-idle detection, per-site daily limits with hard-block enforcement, and a 7-day trend analytics dashboard. Implemented zero-network-request architecture ensuring all user data remains local.
- **TabSaver: Session Management Chrome Extension** [\[Chrome Web Store\]](#) — [\[GitHub\]](#)
Solo Developer. Developed and published a browser productivity extension using **JavaScript and Chrome Extension APIs**. Implemented session persistence and one-click restoration that lets users close entire tab groups and reopen them later, freeing the memory held by open tabs without losing context.

- MediHub: AI-Powered Hospital Management** [\[Healthcare Portal\]](#) — [\[GitHub\]](#)
Full-Stack Developer. Engineered a healthcare management platform using **React, Node.js, and Firebase**. Integrated the **Gemini API** to generate preliminary symptom assessments and auto-summarize patient histories, so clinicians review condensed case summaries instead of full record trails. Implemented role-based access control (RBAC) to enforce per-role data privacy.
- PIERRA: Freelance Client Website** [\[PIERRA Website\]](#)
Frontend Developer (Freelance). Designed and developed a professional bilingual (English/French) business website for a Montreal-based exterior design firm using **Next.js and Tailwind CSS**. Built an interactive project gallery, client testimonial carousel, and a consultation request form. Implemented responsive design, smooth scroll navigation, and SEO optimization for local search visibility.
- StockMaster: Enterprise Inventory Tracker** [\[GitHub\]](#)
Full-Stack Developer. Built an inventory management web application using **Next.js, TypeScript, and Tailwind CSS**. Engineered a reusable component architecture with custom hooks and centralized state management for real-time stock auditing and data visualization.
- Adaptive Priority Round Robin Simulator** [\[GitHub\]](#)
Systems Programmer. Developed a custom OS scheduling algorithm simulation in **C++** to measure CPU performance metrics such as turnaround and average wait time. Designed a **React** frontend that animates the dynamic process queue and plots these metrics live as scheduling parameters change.
- ResumeForge: Dynamic Resume Builder** [\[Resume Builder\]](#) — [\[GitHub\]](#)
Solo Developer. Built a complete resume-building web application using **React, Tailwind CSS, and React Router**. Engineered a real-time live-preview engine with multiple professional templates, client-side PDF export, and auto-save via local storage using React Context API.
- Finance Tracker** [\[GitHub\]](#)
Full-Stack Developer. Built a financial auditing tool with **PostgreSQL** for transaction history and **Chart.js** for dynamic data visualization. Designed normalized schemas for multi-user financial record-keeping.
- Microops Hackathon Project** [\[GitHub\]](#)
 Rapidly prototyped a full-stack solution during a **24-hour hackathon**. Handled both REST API design and UI implementation to deliver a functional MVP under strict deadlines.
- SortnPlay: Algorithm Visualization** [\[Visualizer\]](#) — [\[GitHub\]](#)
 Developed an interactive educational tool using Vanilla JavaScript to visualize core sorting algorithms (Merge, Quick, Bubble). Engineered custom DOM animations to demonstrate algorithmic time complexity and operational flow in real-time.

RESEARCH & PUBLICATIONS

- A Machine Learning and Explainable AI-Based Multiclass Police Fraud Prediction Scheme with SHAP Based Interpretability**
 M. Chowdhury, J. Islam, Md. A. I. Semon, **S. Sarker**, M. M. Barua, A. Akter
 2026 5th International Conference on Electrical, Computer & Telecommunication Engineering (ICECTE), IEEE
 DOI: <https://ieeexplore.ieee.org/document/11429440>
- 7th Rank, DravidianLangTech @ ACL 2026 Shared Task: Telugu LLM Prompt Recovery** (Feb 2026)
S. Sarker, I. M. Sami, P. Mojumder, A. Mallik, H. Murad
 Developed a multimodal Deep Learning approach for **Telugu Language LLM Prompt Recovery**, engineering a style-recovery mechanism to accurately restore linguistic nuances in machine-generated text. *System paper published in the Proceedings of DravidianLangTech @ ACL 2026.* [\[Paper\]](#)
- Finalist, PoliMemeDecode Datathon (CUET CSE FEST 2025)** (Dec 2025)
 Built a multimodal classifier for political memes, fusing visual and textual features to improve classification accuracy.

CERTIFICATIONS

- **All Certifications**

[\[View All on Google Drive\]](#)

Full-Stack Development (freeCodeCamp), Data Science & Python (DataCamp), Responsive Web Design, JavaScript Algorithms and Data Structures. 300+ coding challenges solved across platforms.

LEADERSHIP & EXTRACURRICULAR

- **Vice President (Organizing), CUET Computer Club (CCC)** (2023 – Present)
Competed in inter-university programming contests and collaborative algorithmic challenges. Actively contributed to organizing technical workshops, bootcamps, and intra-university events.
- **Joint Organizing Secretary, CUET MUN Club** (2023 – Present)
Directed organizational logistics for national conferences. Represented delegations in committee sessions, focusing on international technological governance and resolution drafting.
- **Joint General Secretary, CUET Debating Society** (2023 – Present)
Competed in inter-university parliamentary debates, developing high-level logical rebuttals and analytical thinking. Assisted in coordinating and hosting inter-departmental debate tournaments.
- **General Secretary, Development Wing, IEEE CS CUET Student Branch Chapter** (Present)
Secretary of the development wing of the IEEE Computer Society student branch chapter at CUET.
